Re: October 28, 2004 Site Characterization and Removal Action Summary
Report For Building 84A, Located Within Investigation Area D1 in the Eastern Early Transfer
Parcel of Mare Island

Dear Mr. Morris:

EPA has reviewed your request for a determination of no further action regarding Polychlorinated Biphenyls at building 84A, following the implementation of a cleanup action under 40 CFR 761.61(a). Based upon the information provided in the above referenced report, EPA agrees that the PCB cleanup has been completed as specified in the July 19, 2004 notification and that no further action is required with respect to PCBs at this site.

Building 84A UL #01 was a stain specific location on the concrete tile floor inside of building 84A, which was found to contain up to 1.72 mg/kg PCBs. CH2M Hill submitted a Notification of a Self Implementing Cleanup to remove the section of the concrete floor containing PCBs. EPA approved the notification on August 13, 2004. According to your report, a 4 foot by 12 foot section of the floor has been removed and replaced. Three verification samples were collected from the crawl space below the removed floor; PCBs were detected in only one of the samples at a concentration of 0.0849, well below the cleanup goal of 1 mg/kg.

Please feel free to contact Carolyn d'Almeida (415-972-3150) if you have any questions about this letter.

Sincerely,

A handwritten signature in black ink, appearing to read "Kathleen Johnson", is written over the typed name.

Kathleen Johnson
Chief

Federal Facility and Site Cleanup Branch
